Concepts of Biology Samantha Fowler 2018-01-07 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Cyber Bullying: Protecting Kids and Adults from Online Bullies Samuel C. McQuade III 2009-03-20 Before the advent of the widespread use of the internet, bullying was confined to school grounds, classrooms, and backyards. Now, the virulence of bullying has taken on new meaning, as bullies take to the web to intimidate, harass, embarrass, and offend others. Through email, cell phones, text messaging, and social networking sites, bullies can carry out their bullying in many cases without ever having to confront their victims, and often without consequence. Whereas the audiences for humiliation in the past was often limited to those who witnessed the bullying and perhaps talked to others about it, now,

bullying takes place in cyberspace, where images and audio can be posted online for whole school communities to witness, discuss, and comment on. The social, psychological, and sometimes economic trauma experienced by victims can be devastating, and in some cases, cyber bullying has crossed the line and become a criminal act. Because just about anyone can be the victim of cyber bullying, and because it often goes unreported, there are precious few resources available to victims, parents, teachers, and others interested in combatting this new form of bullying. This book provides, however, a thoroughly developed, well-researched analysis of cyber bullying - what it is, how it is carried out, who is affected, and what can and should be done to prevent and control its occurrence in society. The book captures the sensational, technological, and horrific aspects of cyber bullying while balancing these with discussion from perspectives about social computing, various academic disciplines, possibilities for public policy and legislation formulation, education, and crime prevention strategies. Using case examples throughout, readers will come away with a new sense of indignation for the victims and a better understanding of the growing problem and how to combat it.

Selecting Instructional Materials National Research Council 1999-12-17 The National Science Education Standards set broad content goals for teaching grades K-12. For science teaching programs to achieve these goals--indeed, for science teaching to be most effective--teachers and students need textbooks, lab kits, videos, and other materials that are clear, accurate, and help students achieve the goals set by the standards. Selecting Instructional Materials provides a rigorously field-tested procedure to help education decisionmakers evaluate and choose materials for the science classroom. The recommended procedure is unique, adaptable to local needs, and realistic given the time and money limitations typical to school districts. This volume includes a guide outlining the entire process for school district facilitators, and provides review instruments for each step. It critically reviews the current selection process for science teaching materials--in the 20 states where the state board of education sets forth a recommended list and in the 30 states where materials are selected entirely by local decisionmakers. Selecting Instructional Materials explores how purchasing decisions are influenced by parent attitudes, political considerations, and the marketing skills of those who produce and sell science teaching materials. It will be indispensable to state and local education decisionmakers, science program administrators and teachers, and science education advocates.

Patty's Toxicology

The Bully Action Guide Edward F. Dragan, EdD 2011-04-26 Bullying used to be thought of as an unpleasant rite of passage, but now psychologists are realizing that it inflicts real harm. As many as 40 percent of children report that they've experienced episodes of bullying at school or online through their school community. School safety expert Edward Dragan argues that parents need to be proactive in looking out for their children's social well being at school. From his many decades as a Board of Education insider, he argues that schools are self-protective entities and reluctant to address bullying themselves. The Bully Action Guide shows parents how to: • discuss bullying with their child • efficiently address individual needs with teachers • take effective action to stop the bullying
